French's Book of Vegetables

is practical 'from the ground up.' It gives complete directions for growing all vegetables cultivatable in the climate of the northern United States. It represents a departure in vegetable-garden literature. It does not generalize. Leaving the description of garden processes to the general

handbooks, it considers the vegetables not in classes but individually, according to their importance.

To do this most conveniently and succinctly it takes the dictionary form (after a general Introduction of 36 pages), putting its subjects—our garden vegetables, under each of their various names—into alphabetical order, so that the book indexes itself and all there is to be said about a plant is found in one place.

Besides a description of each plant, its habit, value, and use, the book contains detailed cultural directions, covering the soil, planting distances, times for sowing, thinning and transplanting, fertilizing, picking, winter protection, renewal, storage, and the management of diseases and pests. The directions are in accordance with the latest scientific practice. There is much in the volume for which the gardener will look in vain in the

ordinary handbooks on gardening; while obscure points of culture, often necessary to success with a particular plant, are fully covered.

The illustrations, numbering about 150, are all from original drawings, and are designed to exhibit at their best the various plants, roots, fruits, and planting methods described. They are exceedingly helpful as well as entertaining.

ORDER FORM

THE MACMILLAN COMPANY OF CANADA, Ltd.
